Intelligent Switches for Smarter Homes & Offices

In simple terms, they are touch-sensitive Control Pads. Or, in other words, Intelligent Switches. That means the most basic models are the modern substitute for conventional switches and switchboards. Moreover, they are always at an easy reach even in the dark, thanks to a soft illumination. In addition, they come in sleek and stylish designs that can take the luxury quotient of your home a notch higher.

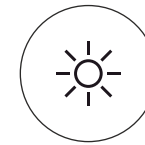

Touch switches when compared to the regular switches are way more **durable** and **safe**. The conventional switches are made for 125k operations whereas these are made for 1 million operations which happen in a sealed casing hence providing additional protection from spark.

Infinity Collection

Touch Switches

Anything But Ordinary

Infinity Collection

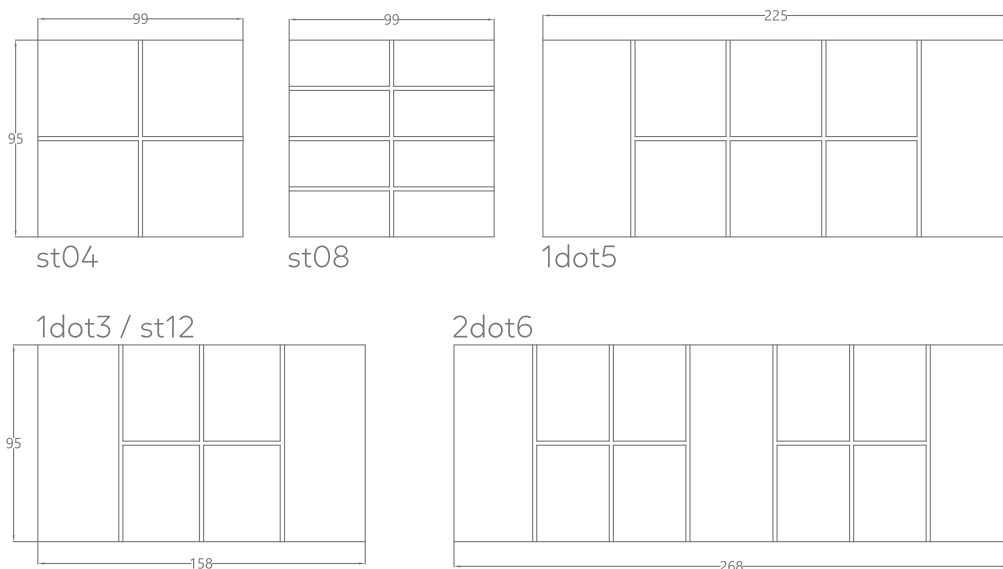

'Infinity', is a premium offering from Digital Dreams exclusively for those who value the blend. This series blends with homes as artistically crafted touch panels. A wide range of material oriented switches, that can match & blend in all kinds of homes and interiors.

Did you Know ?

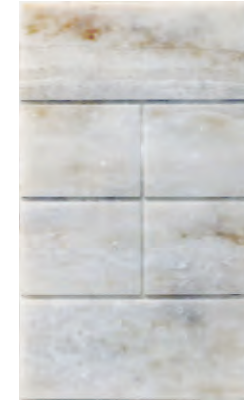

More than intelligent switches, the Infinity Collections is a set of perfect decor for your home!

Features

- Extensive material palette / make your own*
- Minimalist form and function
- Simple and innovative - modern convenience at your fingertips

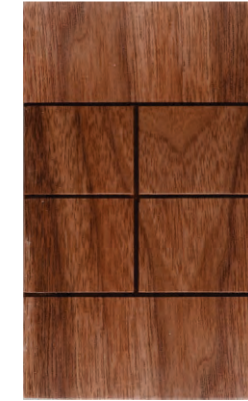

The Infinity Collection supports standard Indian module box sizes making them retrofit and easy to install.

Infinity Stone

Inspired from the natural stones, a wide variety of switches ranging from the pure whites to the darkest nocturne.

Infinity Wood

It introduces some of the widest range of natural wooden switches milled from real walnut, pine, teak and many more.

Infinity Earth

Prepared from the earthiest materials, these are one of our most premium switches with metallic inlays.

Infinity Metals

Prepared from real metals, these are one of our most premium switches with many metallic finish options.

Infinity Crayon

Prepared from solid surface material, these switches can be coated with PU to match the choice of color.

Craftsman Infinity[^] Collection

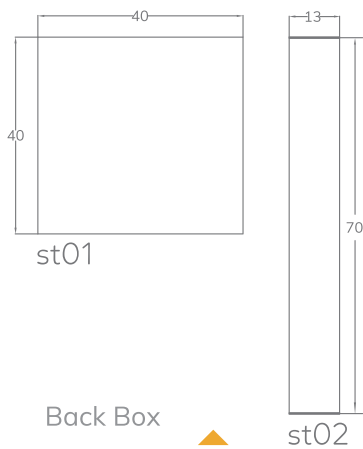

Infinity craftsman collection is a series wherein a switch is pixelated to its atom form. With this, eliminate any obstructions of sizes and forms that restrict your imagination of a switch to operate your home devices.

Any Material,
Any Shape
can now be a switch!

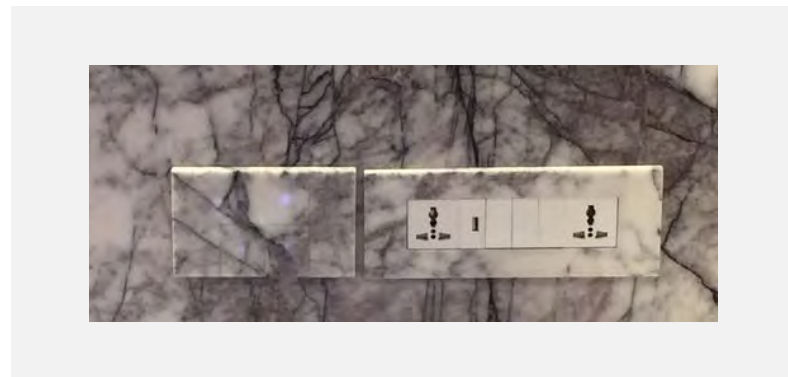

In Situ

/in 'sitju:/'

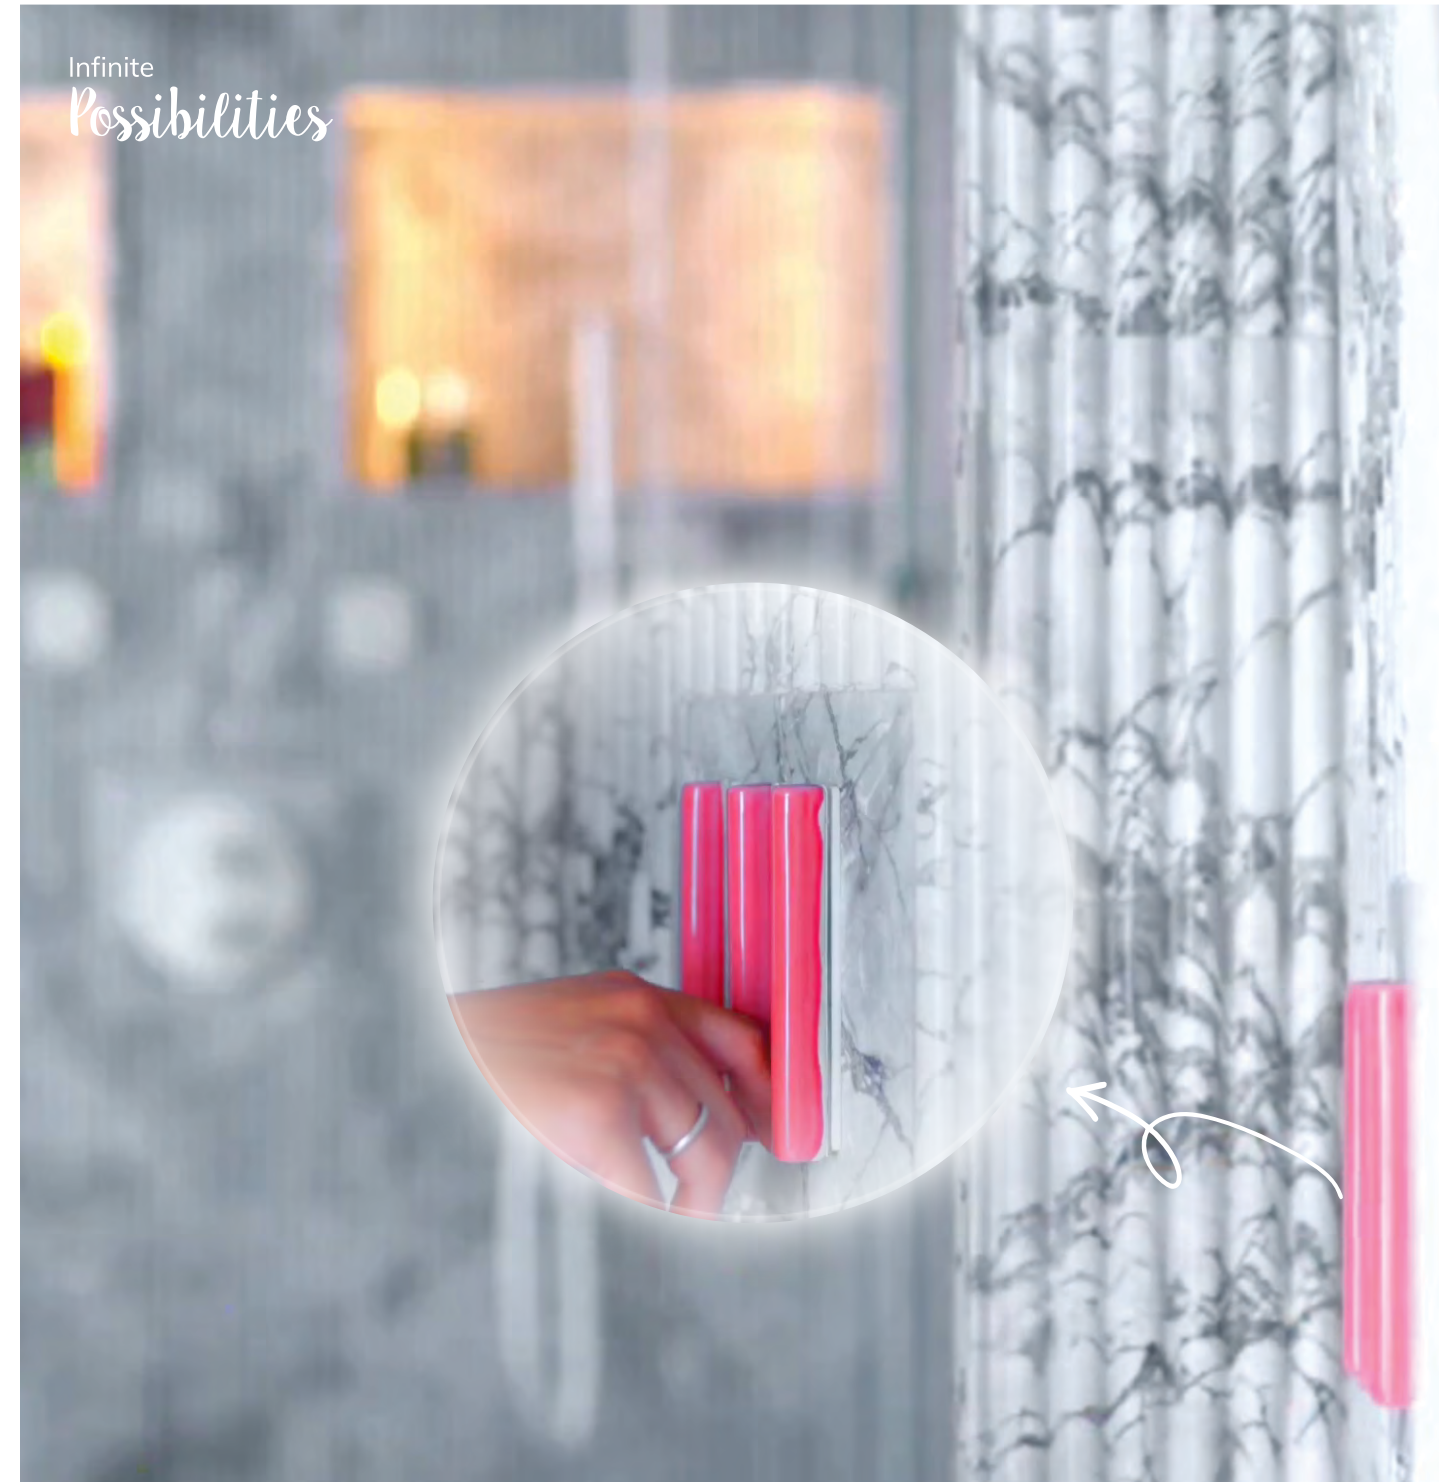

As the name suggest, this series is a complete custom made product that can transform any planes into home control switches. With these, you can successfully camouflage your switches to its background. With endless customization and freedom to design, Infinity In Situ is a result of collaboration between space designers and our team!

new

Bring to your homes, these auspicious traditional arts and crafts that have blessed Indian homes through the ages in the form of our modern smart switches. Depicted over papier mache, a traditional craft from Kashmir these switches are something you would want to see in your homes. We also have a limited edition, hand-crafted Ceramic collection that brings out switches in a form never seen before and Indian clay craftsmanship never done before!

Nakashi from Kashmir

Over hand-beaten papier mache switches, we have these beautiful nakshis telling the tales of the valley of flowers. Handcrafted in Kashmir, the switches can't get more authentic than this!

Gond Art - Bara-singha

Bring Good luck and traditional art form to your home with the customizable color palette. The Gond, Tribal Paintings from Madhya Pradesh, stand out for their captivating patterns.

Madhubani

It is considered to be auspicious and a harbinger of prosperity. We have opted for a contrasting color combination with florals, and birds merging with the contour of the switch.

The Aripa Inspiration

Traditionally, rice powder and sindoor were used to make Aripa paintings during festive times. We have attempted to capture the essence of Aripa with an edgy universal format.

Indigo

A collection of pieces made with indigo ink on handmade papier-mache switches. It also comes with a Marbling effect.

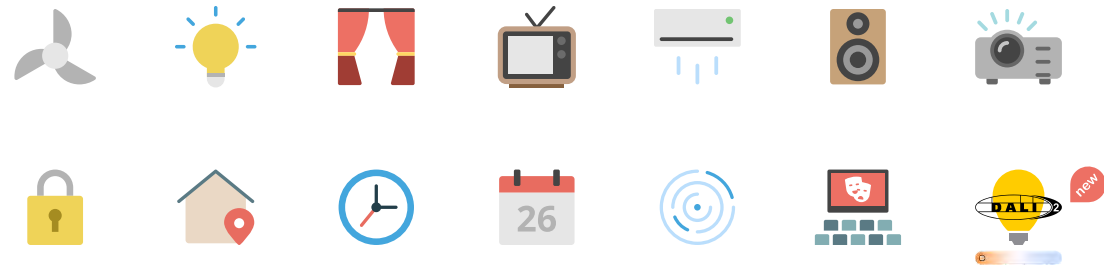

Ceramic

These digital switches are completely handcrafted in stoneware ceramics, fired and matured at 1200 degrees celsius. The stoneware body is created by mixing various types of clays and minerals as per our developed recipe. The glossy surface is glaze or modified silica that has been permanently fused with the switch during the firing. The various finishes you see are a play of solid colours created with natural oxides and ceramic pigments. The sedimentary rock pattern is created using the Japanese Nerikomi technique.

Surface Touch Switches

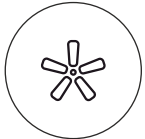

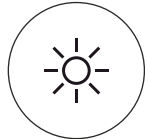

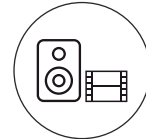

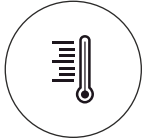

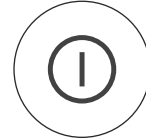

Programmable Switches for Smarter Homes & Offices

The Surface Touch switch range consists of 1-2-4-8 capacitive buttons in a very compact form — 2 module box size. Each button can be configured for different lighting control functions such as on/off, dimming and fan control. It can also be programmed to control individual Audio-Visual device such as TV, AC, Music system and more. The programmable action can be extended to control either a single room, or

the whole house eg. you can simply have a button configured as “Master Exit” which will activate the away scene enabling you to exit the home easily without having to worry about the devices. Surface Touch switches have a soft LED light at the centre which helps navigate and operate in the dark. These switches are available in both mediums wired and wireless (Wifi).

Appliances you can Control:

			
Fan Control (Capacitive Dim)	Light Control (On / Off Dimming)	Curtain & Blinds (Open / Close)	TV/AMP/STB (On / Off Volume ...)

Touch Switches for Smarter Hotels

The Infinity Hospitality is collection of wired and wireless touch switches redefining lighting control of a hotel room. Crafted using glass, these switches are a design innovation enhancing guest experience with usage simplified to the core. The hospitality solution consists of 3 touch switches — outdoor, thermostat and bedside touch pads. The outdoor touch switch has backlit notification about the room state eg,

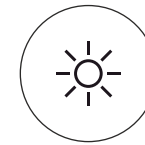

DND, Make-my-room and room occupied. The thermostat touch switch has a built-in display which shows the current temperature settings of the room air-conditioner. The bedside touch switch enables easy lighting, fan and drape control with touch or a small Infrared remote letting guest enjoy the stay rather going around finding switch for each light. Additionally voice and tablet control can also be added.
